

The chart displays efficiency contours (60% to 77%) and brake horsepower curves for the 4-1 1/4 X 270 pump. The x-axis represents flow rate in gallons per minute (0 to 260), and the y-axis represents total head in feet (0 to 80). Three efficiency curves are labeled: (A) 4-1 1/16 X 270, (B) 4-1/4 X 270, and (C) 3-3/4 X 270. The BHP curves are labeled BHP.

Performance based on pumping clear, fresh water at a temperature not over 85°F., and free of gas, air or abrasives, and with bowls properly adjusted and submerged.
